WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Make two. Cut 45 x 120 mm softwood to 420 mm, ends square.

In each end: two 9 mm holes along the length, 52 mm deep, centred in the 45 mm thickness, 50 and 100 mm up from the lower edge.

In the inside face: two 10 mm holes 30 mm deep, 40 mm from the end, at the same heights. They meet the end holes; the cross dowels (barrel nuts) go in here and the bolts screw into them.

Fit: butts between two legs, flush with their tops and outside faces, held by two M8 x 120 bolts through the leg into the cross dowels.

Check: an M8 bolt pushed into an end hole shows through the cross dowel hole; the ends are square to the faces.

GRIDBENCH
