P1	Making sketch for the prototype build plan	2026-10-01	AC

WHERE IT GOES
This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Make two. Cut 45 x 70 mm softwood to 1,020 mm, ends square.

In each end: two 9 mm holes along the length, 52 mm deep, centred in the thickness, 20 and 50 mm up from the lower edge.

In the inside face: two 10 mm cross dowel holes 30 mm deep, 40 mm from the end, at the same heights.

Fit: butts between the legs on their centre line, 105 mm above the floor (80 mm above the foot of the leg); two M8 x 120 bolts and cross dowels at each end. The shelf rests on its top face.

Check: same length as the long aprons within 0.5 mm.
