WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Make four. Cut 45 x 70 mm softwood to 470 mm, ends square.

Drawn: the rail nearest the right-hand legs. Saw a notch 15 mm wide (along the bench) by 25 mm long out of each end, full height, on the side toward the legs, so the rail clears their corners.

The other three rails are plain.

Ends: two 4 mm pilot holes 40 mm deep, 13 and 56 mm up from the lower edge (in the unnotched 30 mm of the notched rail).

Fit: tops flush with the aprons; centres 210, 510, 757.5 and 1,012.5 mm from the inside face of the left legs. Two 6 x 100 mm structural screws through the apron into each end.

The two 8.5 mm holes shown (tile rails only) are drilled in step 10.

Check: each rail drops between the aprons without forcing.

GRIDBENCH

github.com/BoujeeEnjinia1701/gridbench

GridBench cross rail (make 4; one notched): making sketch
