WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Make two. Hardwood strip 45 wide, 300 long, planed to 5.3 mm.

The right thickness is 18 mm (the worktop) less the tile's real thickness: measure the tile and the worktop first and plane to suit, so the tile sits flush with the plywood.

Fit: glued to the top of each of the two tile rails, centred on the rail, running front to back under the tile pocket.

Two 8.5 mm insert holes go through it in step 10, 125 mm each side of the centre.

Check: both packers the same thickness within 0.05 mm.

GRIDBENCH

github.com/BoujeeEnjinia1701/gridbench

GridBench packer under the tile (make 2): making sketch
